

## **NETWRIX CORPORATION ANNOUNCES GROUP POLICY AUDITING IN NEW ACTIVE DIRECTORY CHANGE REPORTER**

*Innovative Software to Further Enhance IT Reporting, Group Policy Auditing and Management Capabilities in Surging Change Management Market*

**PARAMUS, New Jersey** — NetWrix Corporation, a provider of identity management, compliance and change management solutions for Active Directory and virtual environments, announced today that it has added significant features to its highly regarded Active Directory Change Reporter (ADCR). The new software, which is available in both a commercial and FREE downloadable version, allows for expanded Group Policy change auditing, advanced reporting based on Microsoft SQL Reporting Services and the ability to swiftly rollback any unwanted or unauthorized changes at any level in the change management line via the product's Change Rollback Wizard feature.

“At NetWrix, we are committed to unifying the IT change management platform,” said NetWrix President and CEO Michael Fimin. “This version of Active Directory Change Reporter further solidifies that objective while, at the same time, it provides IT professionals with a better tool for expanding the capacity to dissect all Group Policy changes, including policies that can impact security while ensuring the ability to adhere to strict regulatory compliance issues.”

The most significant feature of the new ADCR version comes in the area of Group Policy change auditing where all changes made to Group Policy Objects (GPO) can be better tracked and scrutinized, including changes within newly created, deleted or modified GPO settings. With the product's setting-level reporting feature, the ability to detect all policy changes on the most-detailed level can be done with relative ease. Such functionality unlocks the ability to quickly see critical security policy changes and

changes to desktop configurations. The new version of ADCR also allows for deeper scrutiny through setting-level audits with detailed reporting, which allows IT professionals to delve further inside every GPO in order to extract and report all changed settings. The end result for IT professionals is improved management capabilities across the board.

With the advanced reporting capability, IT professionals also have access to enhanced web-based reports with filtering, grouping, and robust exporting capabilities, which can be shared between IT management and IT auditors. The ability to review such reports, see the changes and quickly restore settings is streamlined further with the product's Change Rollback Wizard feature. The Change Rollback Wizard is a significant time saver for companies of all sizes because it assists users in making quick rollbacks of unwanted and unauthorized changes further down in the change management line.

While smaller companies can benefit from the free edition of the new ADCR, NetWrix also offers a commercial version of this product that further expands reporting capabilities. The upgraded version allows IT managers to monitor the activities of all personnel within the department and provides them with a detailed summary of all changes on a daily basis.
